## MIRCAT

### Rapid-Scan, Ultra Broadly Tunable Mid-IR CW/ Pulsed Laser System

Demanding Mid-IR spectroscopy applications such as nanoscale and microscale chemical imaging benefit greatly from rapid, high-SNR data acquisition. Until now, mid-IR laser sources required compromises in beam quality and wavelength fidelity to achieve high scan speeds. With the introduction of the new MIRcat, you can now have superior beam quality, wavelength fidelity, and fast continuous scanning ( $>1,000 \text{ cm}^{-1}$  at 10 Hz) all in one ultra-broadly tunable, CW/pulsed mid-IR laser.

Incorporating the next generation of Daylight's field-proven Quantum Cascade Laser (QCL) technology, MIRcat delivers uncompromised performance in application-critical areas. This includes peak tuning speeds to  $>30,000 \text{ cm}^{-1}/\text{s}$ , tuning ranges approaching  $1400 \text{ cm}^{-1}$  ( $> 5 \mu\text{m}$ ), CW RIN as low as 140dBc/Hz, peak power output up to  $1 \text{ W}^{[2]}$ , average power output up to 0.5 W, and wavelength repeatability as high as

$<0.1 \text{ cm}^{-1[1, 2]}$ . In addition, MIRcat provides a single  $\text{TEM}_{00}$  output beam, which enables high-efficiency fiber coupling.

MIRcat's flexible, modular design allows user to factory-configure their system for up to four pulsed or CW/pulsed modules, upgrade it later, or add a visible aiming beam<sup>6</sup>. With Daylight's proprietary HFQD™ (High-Fidelity QCL Drive) circuitry, your QCL chips are protected. With a GUI and SDK command set included as standard, MIRcat users can control wavelength set-points, scans, power, triggering, pulse width duty cycle, and repetition rates in pulsed operation. MIRcat brings new capabilities and agility to a wide range of molecular sensing applications including: process and quality control, remote sensing, imaging, and spectroscopy. Please contact us today to learn how MIRcat, and our highly experience team, can help you.
